Personal Projects

- **Mutadarrib**

A digital platform connecting recent graduates and students in field training courses with academic and professional training providers, facilitating the process of finding suitable training opportunities and enhancing networking with institutions in various fields according to the requirements of each specialization. The entire project has been documented.

- **Pharmacy System**

It helps visitors view all information about medicines and cosmetics without the need to go to the pharmacy and seek the help of staff who work in customer service. Also, visitors can ask a doctor to find out their ideal weight based on the body mass index (BMI).

- **Management System**

School management system application: The application helps a persons book courses based on their interests and save their personal data using Mendix Application.

- **Cinema World**

It is a website created using React that suggests movies to the visitor using the API.

- **Space Blog**

"Space AG" web application: It is a platform that allows users to know more information about planets, some galaxies, the latest news related to space, astronomy, and exploration, and the temperature of each country using API.

- **And more ...**
